

CSU - C. WAYNE MCILWRAITH TRANSLATIONAL MEDICINE INSTITUTE

The Clark Enersen Partners, in partnership with Colorado State University, recently completed the new Translational Medicine Institute. The 130,000-square-foot building is located on the South Campus of the University. The building houses equine and small animal surgery suites and an extensive array of imaging systems, including an MRI and CT on the first floor. The first level also contains a large surgical skills laboratory and instructional spaces utilized for training and continuing education. The main floor surgical and equine housing areas were designed in accordance with Animal Welfare Act of 2016 with intensive input by the veterinary and surgical staff.

Contemporary research laboratories designed with extensive flexibility are located on the second floor. These laboratories house a diverse group of researchers involved in translational medicine. This level also contains over 5,000 square feet of innovation space to foster collaboration among varying research groups. The third floor contains the executive offices, a large lecture hall, and an extensive gathering space for continuing education and training. The building also features a three-story atrium that spans the entire length of the building and provides visual connectivity to many of the interior spaces that comprise the building.
