

## DAVID CITY PUBLIC SCHOOLS

We helped the David City Public Schools develop a master plan for a series of facilities improvements over the next decade. The first phase, a new school commons, activities entrance, and weight room, is now under construction.

The addition, located north of the high school gymnasium, will feature a plaza outside the entrance, and a commons area inside the entrance. The weightlifting facility will be located adjacent to the commons, and next to the gym and locker rooms. The project will add 10,000 square feet of space to the school. The addition was strategically located so that further additions and renovations can be made in the most appropriate locations as funds become available.
