

## LINCOLN MEDICAL PARK

The Clark Enersen Partners was involved in a 95,000-square-foot, mixed-use, medical offices/clinic facility and health fitness complex in Lincoln. The complex, made up of the Madonna Rehabilitation Hospital ProActive Fitness Center and Lincoln Medical Park, was the community's first combination medical care and fitness center.

For the Lincoln Medical Park, we provided architecture, interior design, landscape architecture, and structural, mechanical and electrical engineering. For Madonna ProActive, we provided site planning and landscape architecture. We also provided construction administration for both projects.

Lincoln Medical Park is a 36,000-square-foot medical office facility. Its unique design reflects the developer's desire to create an environment that supports healing. In the interior central corridor, natural daylighting, environmentally friendly finish materials, and a water feature work together to simulate natural environments. Smaller "living room" areas provide a place to wait outside of the tenant offices' internal waiting rooms, giving visitors more choice on where to meet, talk with family or calm a fussy child -- a step toward reducing stressful situations.
